PORTABLE TRAFFIC INDICATOR

Prepared by: Lai Hon Boon

ABSTRACT

This project is about 'Portable Traffic Indicator'. This project will deal only with hardware. Without using any software program, it can use to indicate the direction of the traffic. From the title, that we can also know that the traffic light is portable. It is meant for the usage when there is needed, like the time when there is emergency occurs or construction takes places at the two ways narrow roadsides. This it can be placed and removed as wish at any time, any place; and also by using this portable device, the human forces that needed to I charge of indicate the direction of the traffic is removed.

Throughout this whole report, part-by-part it will describe the idea and actual construction of the project. By showing diagrams of the circuit and explain the operation of it to make reader understand the basic of it. At last will show out the analysis and result that is produced, to indicate the working of the project. Extra diagrams and relevant information will all show at the appendix.
