

MAINTENANCE CHARGER

Prepared by: Ganesh Mahendran

ABSTRACT

In any given project, it is vital that the understanding and analysis performed by the student should suit the project and in the end produce an outstanding result. The project report that is being presented as follows is the basic medium that is needed in conveying all the knowledge, experience and results I have obtained as well as my newly found knowledge in the project that firstly introduces the function of the maintenance charger; giving a detailed explanation of what the charger is supposed to do and what it can help prevent from taking place within a 12-volt battery, because of the process of self-discharge that takes place within the battery, which is like a cancer for the battery and in the long term can damage the battery, the charger plays its role to prevent this from taking place rapidly. All this is explained in the introduction section of the body.
