

MODEL RAILROAD CROSSING FLASHER (WITH BEEPER)

Prepared by: Ong Kok Leong

ABSTRACT

The statistics is to tell us that the passengers for the *commuter* train are increasing every year. That means this kind of train has become more important in Malaysia now days. So, my project is a kind of reminder, which is sued to give an audible warning to the people when a train is entering a particular section of track. This project has the similar output to the commuter train. That means it also becomes important now.
