

# INFRARED WIRELESS SPEAKER SYSTEM

Prepared by: Teh Yih Ann

## ABSTRACT

---

This project consists of two circuits, one is the transmitter and other is receiver and it is using an Infrared to transmit the audio signal without physical connection to the receiver. This project paper will fully describe the Infrared Wireless Speaker System that I'm constructing and also the operation of this system. The components that are being used in this project will also be introduced and these functions in this project will also be discussed in this project paper. This report contains also the block diagram and the circuit diagram of this project title. These two diagrams will show the working of this Infrared Wireless Speaker System. The results will be also shown in this report. At last, some alternatives in doing this project and the advantages and difficulties encountered in this project will be included too.
