

CAR WATER TEMPERATURE GAUGE

Prepared by: Lim Choon Wu

ABSTRACT

This is an interesting project that we can analyze my project easily. The circuit actually controlled by two ICs, one is an ‘Analog to Digital Converter’, and another is ‘BCD to Seven Segment Decoder/Driver’. The most important temperature receiver is a ‘High Conductance Fast Diode’, all the details of components can refer by – Details of components. Complete description of these components will be included in the Appendix. In this report I will detail explain the project construction and other tasks involved.

At last, I will state the problem I had facing and how I overcome it. The more you need to know, don’t wait anymore, please go through, and thanks for reading.
