

# VOICE-ACTIVATED TAPE RECORDER SWITCH

Prepared by: Berwyne Tan

## ABSTRACT

---

This project entitled Voice-activated tape recorder switch is a constructional project, where it will trigger the tape recorder too record when sounds are detected provided the tape recorder contains the remote jack. If there is no sound signal for few seconds, the recording function will be paused. Any sound detected by the microphone will reactivate the recording functioning. This recorder contains a microphone, 3 controllers and an indicator; they are the on/off switch, auto/manual switch, sensitivity controller and a light-emitting diode. Their function will be discussed later in the introduction.
