

# DESIGN OF ANTENNA USING MATLAB

Prepared by: Cheah Siang Li

## ABSTRACT

---

The title of my final semester is 'Design of Antenna Using MATLAB'. So, my project is a mix of antenna theory and MATLAB programming and the documentation of my project will be contained in this report.

The contents would serve a directory or a layout of my project to make browsing easier. A small introduction to MATLAB software is done and my objectives of this report are stated in the preceding section. Next, the introduction is a briefing of my project without dealing with the technical stuff. The body of my report will elaborate the further details of my report.
