

MAGNETIC FIELD METER

Prepared by: Leong Choi Sang

ABSTRACT

The magnetic field meter submitted as the project title for the course EGE280A, is an electronic circuit that will detect the direction and also its field intensity of the magnetic field in our surroundings. The operation of the circuit will be discussed later in the analysis and result section.

Finally, brief conclusion will give the readers a preview on the things that have been explained so far. It can be considered as the summary of this report itself. It also contains comments and recommendations that will give you a concise summary of all the project's major outcomes.
