

ADDRESSABLE INTERFACE CARD

Prepared by: Tve Eng Sing

ABSTRACT

This project consists of 3 parts; control part, input part while the last is output part. In this project, I will fully describe the Addressable Interface Card that I constructed and the actual operation of the Card. The components that are used in here will also be introducing and the function of each of them will be discussed. Block Diagram of the interior operation of the project is show in the report to explain the working more clearly. And the Circuit Diagram is printed to show the working of the project with component symbols that make it more clearly with interior operation than Block Diagram.

Alternative results will be shown and some alternative in completing this project and its advantages and difficulties encountered or met will be included too.
