

AUTOMATIC LIGHT SEQUENCING FOR ADVERTISING BACKGROUNDS

Prepared by: Gan Su Yong

ABSTRACT

This report basically details the work involved in designing my *automatic light sequencing* project. In it, you'll find the ideas that I have implemented through research conducted using materials from books, magazines and the Internet.

The topics covered in my report include the basic operations of the electronic components utilized in my circuit design, the final circuit design as well as the **Printed Circuit Board** layout. I have also explained about the problems encountered during the course of this project as a whole. The measures taken to counter these problems have also been given a mention.
