

## CALLING LINE IDENTIFICATION PRESENTATION (CLIP)

Prepared by: Herman Tarmidi

### ABSTRACT

---

Here is a simple and inexpensive circuit to identify the calling number of the telephone system. Almost all the telecommunication department in every country has introduced the facility of calling number identification system. The facility of the calling number identification will be added with the other facilities such as storage of the previous calling number, holding line music, undesired number blanking, etc.

With the calling number facility the user decide whether want to pick up the call or not because the calling number will display from the calculator. The calculator used in this device just to display the calling number like the number display in the 7-segments LED.
