

COUNT-DOWN TIMER

Prepared by: Htun Win Min

ABSTRACT

Most of the modern engineering technology is trying to develop automated computerized controlling system. In attempt to do this, the timing acts as major role between controlling and processing parts. Timers are thus essential tools for the modern engineering technology.

In this study, an attempt has been made to project the counting down of the time. The information provided by the Internet is used as basic data given even though it has some limitations. There are six chapters in this study.
