

SOUND PARTNER

Prepared by: Putera Suman

ABSTRACT

This simple project will show us how the ‘Sound Partner’ works. This simple circuit allows us to connect a second set of headphones to the portable personal-sound system without doing so could destroy the unit’s output driver.

The main part of this report structure is the body where the introduction, results, analysis, objectives and components needed, etc are stated down. For the further understanding of the device. I have listed down the main components data sheet and the references from the books and also website as stated down in the List of references and appendix section.
