

INDUCTANCE METER ADAPTER

Prepared by: Te Chin Cheng

ABSTRACT

This project is to build up an electronic circuit, which can measure the inductance value and display it on a digital multimeter (DMM). How does it work, then you must read through this report and you will get a complete answer.

First of all, is the Introduction and Objective part of my project, following is the explaining of how my circuit work and the overcome of some encountered problem. At last will discuss the advantages and disadvantages of my project.

Furthermore, you will understand the time arrangement for completing this project. You also can refer some courses of information or references about this project in the Appendices,
