

# 15-WAY INFRARED REMOTE CONTROL

Prepared by: Ngian Wee Ann

## ABSTRACT

---

The aim of this project is to design and construct a transmitter, receiver and 15 ways receiver. This project report includes the detail operation of these 3 modules. I am highly recommended user to read this project report before using it for several reasons:

- Understand the process of the transmitter and receiver module clearly
- Employ the transmitter and receiver modules with specific voltage correctly
- Handle the transmitter and receiver modules safely  
(Receiver module consist 240v AC power supply, it is dangerous if user don't follow the proper instructions)
- Install the electrical devices to the receiver module securely

This project report contents a lot of photographs and figures which lead user to be more understanding about my project.
