

AUTO SHUT DOWN TIMER

Prepared by: Tan Chun Haw

ABSTRACT

The aim of this project is to design and construct an 'Auto Shut Down Timer'. This product is already available in the market now.

This project is use to make the people more convenience because it will automatic shut down an electrical appliances connected to tit when the pre-select time is reached. It can reduce the risk to happen the fire risk because the internal circuitry of some devices still being active although we alert switches it off. Just simple press a channel key and t all springs to life again. Through this project, the risk can be reducing because when the user want to how out or do something else important, they can pre select the time to shut down those electrical appliances which are still operating at the time they go out. It can be use for many devices like washing machine, computer, TV, radio, and the others.
