# MICROCONTROLLER BASED STEPPER MOTOR AND SEVEN SEGMENT DISPLAY INTERFACE

Prepared by: Wong Beng Wee

## ABSTRACT

The main idea of my project is to control the stepper motor and apply messages on the 7-segments display by using the PIC. On the other hand, I will be able to program on PIC in order to control other devices that I wanted to control. The knowledge of programming PIC is different from other software programming or microprocessor programming. Each has their own assembly languages, architecture, and programming logic.
