MULTIPURPOSE CIRCUIT FOR TELEPHONE

Prepared by: Chia Yu Xun

ABSTRACT

This report contains details of the theoretical and constructional aspect of the project. Introduction briefly explains the functions of the project.

The analysis section highlights the technical operation of the circuit, design of the circuit, schematics and PCB layout of the circuit.

Construction section would provide information on the construction of the project as well as the processes took to fabricate the PCB.

The Results/testing section contains initial test results of previous test conducted including a simulation test on the 1st half of the project.

At the Appendix however, contains photographs of the completed project, minus the casing since the casing is still being constructed.
