OFFLINE TELEPHONE TESTER

Prepared by: Chew Yee Hooi

ABSTRACT

The project Offline Telephone Tester work as a standalone telephone instrument tester that is used to test a telephone device either in pulse type or tone types. The very special figures of the project are that is does not require any of the telephone line for testing purpose and it can simulate the voltage source that supplied in the phone line. The device is able to test each working part in the telephone instrument separately and provide a fast and accurate result to the telephone under testing.
