PHONE INTERCOM / VOICE MAIN SYSTEM FOR APARTMENT

Prepared by: Tan Jiunn Ming

ABSTRACT

The idea of this project is based on the intercom concept that incorporates telephone and voice recording device. The project that I have chosen is apparently applied in an apartment or visitor(s) to communicate with the person(s) who live in different unit before the visitor(s) is allowed to enter the apartment. In addition, it happens that the resident(s) is not at home and the visitor(s) wants to leave an important message, he or she can do so by leaving a message through a voice one set. Recording device cum with the telephone set.
