

SMART HOUSE USING PLC

Prepared by: Anton Gareth Pereira

ABSTRACT

The sole purpose of doing this project is to fulfill the requirement of the diploma course but I do have personal reasons as I feel I would gain a lot by understanding the operation of the PLC and especially how to program it.

This project is basically a combination of a number of circuits all linked up to the PLC to work as a system. In this report, I will discuss the construction, results, analysis and problems encountered.
