

0-30VDC STABILIZED POWER SUPPLY WITH CURRENT CONTROL 0.002-3A

Prepared by: Lim Lai Hock

ABSTRACT

Before going to the main body of this project report, I would like introduce my project topic and a short summary about it. Actually, my project is going to do a hardware project, it is a stabilized power supply. Normally, it is used in experimentally laboratory for acquiring dc voltage supply. Also, the dc voltage produced by stabilized power supply is used to power all types of electronic circuits, such as TV receivers, stereo systems, VCRs, Cd and others.
