

# TELECONVERSATION LIMITER

Prepared by: Sanil Kalikkot Valappil

## ABSTRACT

---

This report basically explains in detail the work involved in designing of the project titled Teleconversation Limiter. In it you will find the ideas that have been implemented to research conducted using materials from reference books, magazines, journals and also from the internet.

This project was created to put an end to all your headaches concerning people especially youngsters talking over the phone for long hours. It provides a solution for the long lasting problems of telephone owners who often pay hefty phone bills due to the misuse of their phone. It is a gadget that is connected to the telephone line to control the calls. However this electronic gadget is just a basic model. It can be later modified to make it more efficient. For example the gadget can be integrated within the telephone instrument itself. This would add a lot of options to a telephone and make it more convenient for the user to use. This gadget will prove a lifeline to all those people who are paying a lot of money for phone bills.

The details of the telephone conversation limiter including its functions, operations benefits, characteristics and lots more will be discussed later on this paper. The report also contains pictures and figures to help the reader understand the project in detail. In addition to that, technical specifications of the components used as in data sheets are also enclosed for reference.
