

# **DANCING FOUNTAIN**

Prepared by: Hameed Bushra

## **ABSTRACT**

---

Musical water fountains are ornamental structure that can be used in public places to entertain and relax human minds.

In this project paper is about history, construction and basic theory which might be necessary in constructions a simple musical water fountain. Behind I some recommendations will be given for those who want to construct fountains in with more water patterns.

At the end of this report, data sheet of the used components and formulas used to design the amplifier circuit is given as additional information. In addition to his some illustrations and photographs are also attached to give a clear understanding about the project.
