

# 10-BAND GRAPHIC EQUALIZER

Prepared by: Toh Kee Hong

## ABSTRACT

---

10-Band Graphic Equalizer is purely electronic project which mean this project does not consist of communication, software programming and microprocessor for controller. Reader can understand more clearly about electronic such as the operation of the Operational Amplifier (Op-Amp) and audio signal processing system. This report provides illustration such as circuit diagram, block diagram to let the reader easily to understand the project and also can study the circuit available. This report also provides the project outcomes and data sheets of the IC ( TL084 ), therefore reader can study the output and knowing the specification and application of that IC.

For this project, I also have to find more relevant information and modify the circuit to obtain a better outcome.
