

TO SOLVE A PRODUCTION PROBLEM IN A PARTICULAR PROCESS LINE IN XXX COMPANY

Prepared by: Chai Pooi Hang

ABSTRACT

The title of this project is to solve the production problems in a particular process line xxx company in Klang Valley. The main objective of solving the production problems is to increase the output of the company.

The objectives to rearrange the layout of the core assembly section are to promote orderliness, convenience for operators, save space and increase productivity. The flow of the material through the core assembly operation can be observed obviously from the flow diagram. In order to reduce black tracking and congestion, the materials should be placed in sequence and close to the point of use. On the other hand, the material handling equipment should be standardized.
