

WRITE A FORTRAN PROGRAM TO RETRIEVE THE ADDRESSES OF A STUDENT CONSIDERING ERGONOMIC CONCEPTS

Prepared by: Chin Kin Heng

ABSTRACT

The project undertaken concerned with writing, constructing and make a research of the FORTRAN Programming in order to let the users input the name of a student and the computer programming software will be able to search the address of the student.

This thesis has been written in the aim of providing the readers, the fundamental knowledge about how the FORTRAN program was being applied to the real world. Before that, this project requires the application of knowledge studies in first and second academic years. I have found this project being very challenging.
