

# **SIMULATION OF THE RESOURCE PLANNING OF A SOCKET**

Prepared by: Tham Nyap Vui

## **ABSTRACT**

---

This project deals with the simulation of resource planning of a socket. As the project name implies that the user is using a computer simulation software called 'Fourth Shift Mentor' to simulate the MRPII.

The main purpose of generating this software is to evaluate some of the aspect that may be ignored by the manufacturing company in real life environment.

After the reader has read this project, they will have the general knowledge of how the MRPII theory can be generate out throughout this computer software.
