

SIMULATE AN MRP SITUATION FOR A COMPUTER DESK BY USING MRP II SYSTEM

Prepared by: Tin Wing Yee

ABSTRACT

Simulate an MRP situation for a computer desk by using MRP II system (Fourth Shift Manufacturing Software System) is introduces in this project. MRP is the short form of Material Requirement Planning. It is a technique of working backward from the schedule quantities and need dates for end items specifies in a master production schedule to determine the requirement for components needed to meet the master schedule.
