

SOLVING A PRODUCTION LINE PROBLEM IN MALAYSIAN MIRRORS SDN. BHD.

Prepared by: Henry Lewis

ABSTRACT

The project which I have undertaken requires me to study one workstation in a mirror production line that is the loading of float glass (raw glass) onto the rollers. The management of Malaysian Mirrors (MM) wants to increase productivity of mirrors and therefore the only way of achieving this objective is to load more raw glass onto the rollers. Therefore knowing the goal to achieve, I have taken the necessary steps to rectify the problem and came up with proposal to the problems.
