

DESIGN A BABY-CHAIR FOR DINNER PURPOSE WITH HUMAN FACTOR CONSIDERATION

Prepared by: Tan Kang Kai

ABSTRACT

This project is basically about Design a Baby-Chair for Dinner Purpose with Human Factor Consideration. Based on the criteria of safety, flexibility, portability, and convenience to use. Thus, the significant objective of this project is to design a baby-chair which can fit varies of children and safety at al. as ergonomic is a study about men and his work system, it is necessary to apply this knowledge into my design. in addition, the relevant research such as research on safety guidelines of baby gear, existing of baby-chair dimension of Asian children, general development of children and dimension of dining table. The aim is to collect data to provide some guidelines in my design. then, the results are generates after analyzing the information that is collected from the research. To choose the best design, the trade-off and proper modification are made to achieve that best result that is to achieve the rules of form-follow function.
