

DESIGN A SYSTEM OR DEVICE TO HARVEST RAMBUTAN

Prepared by: Ung Tin Tin

ABSTRACT

The rambutan fruit is not being protected well at the time of harvesting, this is because the rambutan is being harvested by using a simple cutting device, some more, got people climb up the tree and pluck the rambutan, and this is very dangerous. From all the methods people harvest rambutan, that's not a good method to prevent the fruit drop from the tree and create waste. Therefore, ***design a system or device to harvest rambutan that can prevent waste***. The main purposes of designing a rambutan plucker that can minimize work and ease the job. It should present in a user-friendly manner, light in weight, safe, portable and ergonomic.
