

COOLING SYSTEM THERMOS

Prepared by: Ng Hock Chai

ABSTRACT

Industrial engineering methods are used in various human activities such as manufacturing, designing, management and other. My project title is 'Cooling System Thermos'. The reason of doing this project is there is a willing to improve the quality of human life by reducing the inconvenient environment.

Based on the research and analysis, I have design he equipment that the materials are completely modular so my design is virtually unlimited to our imagination.

There will be detail information about several analysis that been conducted. Before doing this design, it is a wise way to consider every factor and try to eliminate limitation and making the improvement if possible.
