

REDESIGN HOUSE PHONE WITH HUMAN FACTOR CONCERN

Prepared by: Bong Kok Liong

ABSTRACT

This report deals with the design of house phone for improving human welfare as well as the performance within a population. Here, I tend to provide the audience a base of understanding how the Human Factors can act on the designing of a house phone for human use.

On the way, I also applied information about human behaviors, abilities, limitations, motivations and other characteristics to the design of a house phone for productive, comfortable and effective human use.
