

DESIGN A WORK CELL FOR JS-10 ROBOT TO GENERATE THE WORK 'INTI' IN CHINESE ~PART 3~

Prepared by: Loong Yih Huey

ABSTRACT

This project report is intended to provide a comprehensive survey of the technical topics related to design a work cell doe industrial robotic arm – JS10 to generate the work **INTI** in Chinese ~ Part 3. As the field of robotics is emerging to become one of the important automation areas since 1980s, managers, technicians, engineers (especially engineers and mechanical engineers) must be educated and trained in order to realize the full potential of this technology.
