

# CONVERTIBLE STROLLER

Prepared by: Nathania Pranatio

## ABSTRACT

---

This project contains detailed information about the convertible stroller, which is the title of my project. As we know, a stroller is a device that most parents use these days as a mean to carry their babies whenever or wherever they travel. My convertible stroller is built to overcome problems that might be encountered by parents during dining time with their children.

This report contains 3 main parts, 1<sup>st</sup> is the introduction section where I will introduce my product, next will be the construction of the prototype and then the conclusion part.
