ERGONOMICALLY DESIGN OF NURSING SEAT

Prepared by: Kong Nyet Fung

ABSTRACT

Generally, the nursing seat had the features of adjustable pneumatic seat height, adjustable lumbar support, flexible back, headrest, adjustable armrest, baby support, contoured seat, five-point base, and cushion coating. Adjustable characteristics allow more users, while other features give comfort and safe working environment. Lumbar support to lower to guide the spine into an automatically correct posture and give additional support to lower back to prevent backache. The baby support helps to lower the risk of numb in hands, by supporting the forearm with an adjustable arm support. Besides that, it allows user to put the equipment needed for bottle-feeding.
