

IMPROVING THE ENROLMENT PROCESS FOR SOEAT STUDENTS

Prepared by: Lee Choon Yit

ABSTRACT

This project aims to improve the enrolment process for the students who wish to join the School of Engineering and Technology (SOEAT), at INTI Nilai College Campus. By using various methods including time study, statistic collection and analysis and etc, the project aims to improve the overall lead time for which a student needs to complete his or her enrolment. Due to the fact that the enrolment process cannot be reenacted or simulated live, simulation software called 'ARENA' will be used to show how the students will react to the improvements. The main purpose of the simulation software is to repair and try to recreate the enrolment environment, and tat with the data collected; improvements can be made and shown in the software's results.
