

RESEARCH ON THE PROCESS OF LIQUID PETROLEUM GAS (LPG) CYLINDER (AWANASIA)

Prepared by: Terence Heng Chin Meng

ABSTRACT

Liquid petroleum gas (LPG) cylinder is a common thing that we usually see in our house kitchen. When we were young, we usually watch our mother and grandmother busy cooking their special dishes in the kitchen, sweating their way to cook delicious diner for the whole family. For the Chinese family, it is even more common as all the family members are joined together to have this special gathering during Chinese New Year once every year. There will be a lot of home cooked meal by female member of the family.

In this project, we will touch mainly on the process of LPG cylinder. We will visit a factory that manufacture the cylinder and learn every step and machine that is used to manufacture the cylinder. Apart from learning the step to manufacture a cylinder, the problem of the process flow will also be reviewed to check if there is a problem. The problem may be bottlenecking, safety issues etceteras. In this case, every problem that is reviewed will be written in this report and the solution for the problem will also be review dint his report.
