

AIR CONDITIONING SYSTEMS

Prepared by: Hanafiah B. Nirwan

ABSTRACT

There are 2 main objectives of this project the first one to give a clear view of 2 main air conditioning systems, which is central and split air conditioning system and the advantages and disadvantages of each system. Secondly to compare the cost of different systems for a specific problem. Analyzing is made to choose which system is the best from pricing point of view. In this project Block C of Inti College, Subang Jaya is taken as a model to calculate the cooling capacity and to implement one of the systems.
