

DESIGN AND ASSEMBLY OF LECTURING AID TO DEMONSTRATE THE WORKING OF AN AIR CONDITIONING SYSTEM

Prepared by: Tay Kok Leong

ABSTRACT

An air conditioning system controls and maintains the temperature, air movement, humidity, air cleanliness and sound level.

It also gives comfort and health of the occupants of the air conditioned space by removing odors, bacteria toxic, gases and with ionization of air.

The air conditioner that we are using for this project is the YORK air conditioner which is a split unit air cond that consists of the indoor unit and outdoor unit.
