

DUCT DESIGN FOR INTI BLOCK OF CLASSROOM

Prepared by: Chow Chung San

ABSTRACT

The objective of my title's 'Duct Design For Inti Block Of Classroom' is to deliver a right quantity of cooling air to each classroom or laboratory and also at right temperature so that the entire classroom or lab of INTI block will at comfortable and provide convenience condition. In order to deliver or a right quantity of cooling air to the space we have to ensure that the size or the cross – sectional area of duct to deliver a cooling air. That is because, the difference space need varies cross-sectional are of duct to deliver a vary amount of cooling air. Through this project I can know some basic ideas or concept about how to design a duct. The concepts and ideas that I know from this project maybe very useful. If I have work with air distribution or air conditioning company.
