

HOVERCRAFT

Prepared by: Saw Khay Tat

ABSTRACT

This project is concerning with the objectives, organization and management, and assessment methods used for Mechanical Engineering project in Hovercraft Design. In the beginning part of the project, it involves the theory and technical application of the air cushion. While the middle part mentions about the activities planned throughout the semester, and the problems which will be facing before and during the project. The last part of the project shows the design of the project.
