

AUTOMATED COMPOST HEAP MAKER

Prepared by: Choi Yong Kwan

ABSTRACT

This project is to make an automated compost heap maker. The purpose of this report illustrates about the new development of a gardening compost machine that can improve the quality of the soil in garden at our houses and save the environment by compost the organic wastes in our garden and kitchen. This project paper also will illustrate about this machine, how it functions and how the ingredient can be decomposed. In the report, we can know:

- The main purposes of making this machine
- How the machine functions
- How the machine helped to decompose the ingredient
- The materials used for constructing the machine
- The outlook of the machine and
- Some calculation of the work done by the machine
