

# **ROTATED PRUNING SHEAR POLE**

Prepared by: Teo Ming Wei

## **ABSTRACT**

---

This report is based on findings and research conducted from April 2001 to July 2001 as a requirement for the Final Year Project of the Diploma in Mechanical Engineering (DME).

The purpose and objective of this project is to conduct survey on pruning devices and built a prototype based on the given title that is the rotated pruning shear pole. This title also requires me to design a tree-pruning device with multiple functions to fulfill the needs and also to make pruning an easy task.
