

# **AUTOMATIC PET FEEDER**

Prepared by: Lee Jia Chern

## **ABSTRACT**

---

Nowadays, there are a lot of people who love to rear pet yet most of them encounter a big problem of feeding their beloved pet on time. Can you imagine if you forget to feed your beloved pet, what will happen to your beloved pet?

My project is a machine that can feed the pets automatically and it is more suitable for dog. This machine is very useful especially for those people who are always forget to feed their pet. When the owner of the pet is not around, the pet owner can use this machine to feed their pet on time without any worries.

This machine is controlled by two timers, we just need to put a certain amount of food into the container and adjust the timers, and then the machine will feed your pet automatically on time.
