

DC MOTOR CAR

Prepared by: Heng Kee Siang

ABSTRACT

In now can see the world, the petrol price is increase and increase in every year. So need find something energy to repaid there. And the some Car price is also too expensive, and there maintain price also more expensive, so need some low price and low maintain and not petrol car in the world.

However, the product that designed wills emphasis more n mechanical component rather than electronic component that cost extremely high. By introduce this low cost car.

In this project will give know how to design and connect the all component in the car. And the same time comparison of advantages and disadvantages of DC Motor Car and normal car, and included some calculations and figures for the use of strengthening my argument.
