

CAR BRAKE SYSTEM BY USING ELECTROMAGNET

Prepared by: Yoon Jenn Ling

ABSTRACT

This project contains information about the new brake system. Here, I will describe a short summary of what will be the contents of the whole project report.

With respect to the format of the project and allow you understand with clarity, I would like to divided into 3 categories, that are list of photo, body and conclusion. The body consists of introduction, construction, result and analysis.

There is an introduction part giving detailed information about the new brake system, where the applicable, the people who might be using this product, and the objectives of my new brake system.

There will be a write out about the construction part, where the cost of the product, initial design and final design. There will also be a list of material, components used to build it and an assembly of parts.

The calculations come after the construction part, where descriptions of the final outcome of the product with a few points of analysis about the new design brake system.

Last, will be the appendix column will have specific information about the material specifications, data, diagrams, that are relevant to the report.
