

DESIGN OF PICK AND PLACE OPERATION ROBOT

Prepared by: Loo Twan Huang

ABSTRACT

The field of robotics is emerging to become one of the important automation areas for the 1980s and 1990s. Engineers, technicians, and managers must be educated and trained in order to realize the full potential of this technology.

By reading through this project report, it will help us to understand more about robots which included its configurations, motions, driving system ...etc

This project report also will provide a basic idea about designing to help us in future when we are explore to the industrial field.
