

# **ERGONOMIC WHEELBARROW**

Prepared by: Cheang Chia Hur

## **ABSTRACT**

---

I was assigned to modify the wheelbarrow, which is a pioneer product that the markets still haven't existed yet. The main objectives of the project are:

1. To emphasize on a human factor and make some improvement on that area
2. To enhance some of the parts so as to increase a person's working efficiencies
3. To improve the strength when using wheelbarrow by designing some new method to carry it.
